

K–5 Environmental Literacy Curriculum

About **Green Guardians**

Green Guardians' mission is to **advance environmental literacy** in K-12 schools by integrating environmental and climate change education into core subjects through standards-linked curriculum, experiential learning opportunities, and community resources to create civically engaged and environmentally responsible students.

Environmental Literacy and Our North Star

The K–12 school system’s most important responsibility is to equip students with **21st century skills** that will provide a foundation for solving real-world problems.

One of the greatest challenges facing our world is **climate change**; therefore, teaching students to develop the skills to understand and address these issues must be at the forefront of every student’s education.

Environmental and climate literacy provides students with the skills to understand the **interdependence between natural and human systems**, develop solutions, and take actions that will build a more sustainable and equitable future for all.

Environmental and climate literacy is interdisciplinary and extends beyond the silos of traditional educational subjects.

While almost **86% of K–12 teachers** in the US believe that climate change education should be taught in schools, less than half of students in the US are receiving regular climate change education. Teachers cite (1) a lack of appropriate materials, (2) a lack of subject matter knowledge, and (3) a lack of alignment with core subjects as some of the principal reasons that climate change education is not taught in their classrooms.

Green Guardians solves this problem by **helping teachers and schools** incorporate environmental and climate literacy in the classroom and in the community through a standards-linked supplemental curriculum that aligns with core subjects and through experiential learning opportunities and resources that are local and culturally relevant.

Our Environmental Literacy Lesson Series

Green Guardians lesson series are the only **plug-and-play** curriculum materials designed for elementary grades that cover core subjects through an environmental and climate change lens.

- They cover important **environmental and climate change issues** and practical **solutions**.
- They provide opportunities **for project-based learning**.
- They are **multi-disciplinary** and cover science, history-social science, English language arts, and math subjects.
- They are **standards-linked** to **Next Generation Science Standards** and **Common Core State Standards**.
- They are suitable for both **in-person** and **distance learning environments**.
- They provide teachers with all the materials needed for a **blended learning classroom**.

Lesson Series **Format**

Each of our lesson series follows a similar format and includes **3-5 40-minute lessons** and **offers a solutionary approach to problem solving**. Each lesson series identifies an unsustainable or unjust problem and then suggests healthy, equitable solutions. Our goal is to teach students how to make choices that do the most good and the least harm to people and their environment.

Lesson 1 begins with a problem to be explored. Here, we raise consciousness about the environmental literacy topic of the lesson, for example, waste generated by a birthday party. By way of a story, we create opportunities for students to rethink and reflect on their own practices.

Lesson 2 takes a deep dive into the issue in different ways through questions, investigations, interviews, and other kinds of research. For example, these activities may lead to an exploration of the 3 Rs (Reduce, Reuse, Recycle).

Lesson 3 explores solutions. We ask students to arrive at these solutions themselves, with proper scaffolding. We include real life scenarios, photos and video clips to relate the issues in the story to the real world.

Project-Based Learning

Each lesson series includes a culminating activity or project that provides opportunities for students to use their learning to take action!

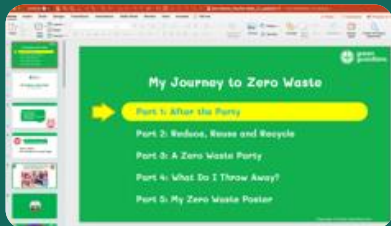

Lesson Series **Content**

The lesson series provide teachers with everything they need to carry out lessons either **in-person**, **online**, or in a **hybrid setting**.

Guides

Each lesson comes with teacher and family guides as well as lesson plans

Teacher PPTs

An all-in-one ready-to-use packet for teachers

Stories

A context and setting in which the learning takes place

Videos

Explainer videos on key terms and core concepts

Games

Fun interactive games that assess students' knowledge

Activities & Projects

A practical outlet to demonstrate student learning

Environmental Literacy Topics

Agricultural
Education

Air Quality

Career Awareness &
Workforce Development

Climate Change

Coastal & Marine
Education

Energy Education

Environmental
Justice

Environmental

Climate Ready Schools

Waste Management

Watershed Education

United Nations Sustainable Development **Goals**

Green Guardians' lesson series are aligned to 12 United Nations Sustainable Development Goals (see the highlighted goals below), which provide a call for action by all countries and communities around the world **to promote prosperity while protecting the planet.**

Curriculum **Standards** and Key **Frameworks**

Local and culturally relevant environmental and climate education learning opportunities increase students' critical thinking skills, social-emotional health, civic engagement, and content skills in science, history-social science, English language arts, math, and more. These learning opportunities help students learn civic engagement and valuable career-ready skills as they address important environmental issues in their communities.

To ensure that teachers and schools can provide these valuable learning opportunities to students, Green Guardians lesson series are **aligned to important standards and frameworks**.

Environmental Principles & Concepts

Next Generation Science Standards

Common Core State Standards

- English Language Arts
- Math
- History-Social Science

Annual Pricing

Green Guardians lesson series are **reasonably priced** on a per school, teacher and district basis. Discounted pricing is available when purchased at a large network level.

Licensee	No. of Lesson Series	Per Annum \$
Teacher	1	20
Teacher	6	100
Teacher	12	160
School	12	600
District (1-10 Schools)	12	2,800
District (11-24 Schools)	12	6,000
District (25-50 Schools)	12	12,000
District (51+ Schools)	12	18,000

Teacher Testimonials

“Green Guardians lesson series are teacher-friendly and include everything you need to teach the lesson.”

– Carolina Orlando, kindergarten teacher, Millbrae Elementary School District

“The lesson series were eye opening for my students.”

– Elisa Garcia, 1st grade teacher, Saddleback Valley Unified School District

“The Green Guardians lesson series teach students about an environmental problem and offer a solution. My students were asking all day long, ‘When will we learn about the Monarch Butterfly?’ They really enjoyed the lessons!”

– Susana Martinez, kindergarten teacher, Santa Ana Unified School District

“My kiddos enjoyed all the lessons. I teach science/social-science virtually every day and the materials in the lesson series made it really easy to deliver online.”

– 1st grade teacher, Adelanto Virtual Academy

“Use it! Plan for a two-week implementation for each lesson series and really focus on what the kids can change in school. Get their families involved!”

– Alycia Prekaski, 1st grade teacher, St. Katharine Drexel Academy

“My students really appreciated the interactive video games. They remembered so much more when we played the game.”

– 1st grade teacher, Oakland Unified School District

List of Lesson Series

Green Guardians' environmental literacy lesson series has a total of 12 lesson series, with 6 lesson series for grades K–2 and 6 lesson series for grades 3–5. Using a solutionary and place-based approach to teaching environmental issues, each lesson series consists of stories, videos, interactives, games, activities, and projects and includes 3–5 40-minute lessons.

K–2 Lesson Series

1 Bananas about Bananas

2 My Journey to Zero Waste

3 My Animal Friends

4 My Carbon Footprint

5 Water Justice

6 My Green School

3–5 Lesson Series

1 Bananas about Chocolate

2 My Journey to Circular Fashion

3 Exploring Ecosystems

4 My Carbon Neutral School

5 Tough Choices

6 Climate Change and Our Oceans

Green Guardians K–2 Lesson Series

Bananas About Bananas

Students trace the journey of bananas from farm to home, consider the environmental impact at every stage, and envision a greener supply chain.

Topics Covered:

Pollution | Resource Conservation | Sustainable Human Development | Waste Management

Key Learning Points:

Lesson 1

- Bananas travel a long way from farm to table.

Lesson 2

The banana's journey creates waste and pollution; it contributes to global warming due to:

- transport vehicles that are powered by gasoline;
- warehouses and other places along the supply chain that are powered by electricity generated from oil, gas, or coal; and
- discarded packaging and other waste products that end up in trash bins and landfills.

Lesson 3

We can make the supply chain greener by:

- replacing gasoline vehicles with electric ones;
- composting banana peels and other plant matter;
- walking or biking to markets instead of driving; and
- using few or no single-use bags and recycling packaging material.

Students Will Be Able To:

- define supply chain (L1);
- identify the vehicles, places and packing used in the banana's supply chain (L1);
- list ways that the banana supply chain impacts the environment (L2);
- suggest solutions to make supply chains greener and more sustainable (L3); and
- use new vocabulary correctly (L1–3).

Green Guardians K–2 Lesson Series

My Journey to Zero Waste

Students compare and contrast two birthday parties (one that generated a lot of waste and one planned around “zero waste”), consider the environmental impact of one’s personal waste, gain an understanding of the three Rs (reduce, reuse, recycle) and learn to practice zero waste in their own lives.

Topics Covered:

Environmental Justice | Green Guardianship | Pollution | Resource Conservation | Waste Management

Key Learning Points:

Lesson 1

- We create more waste than we need to.
- There are different kinds of waste.

Lesson 2

- The world is a healthier place when we create less waste.
- We can make less waste if we reduce, reuse, and recycle.

Lesson 3

- We can reduce, reuse, and recycle in practical and creative ways.

Lesson 4

- We can determine how much waste one person creates in a day.
- Graphs are useful in showing how much and what kind of waste we make.

Lesson 5

- We should all work toward zero waste.

Students Will Be Able To:

- define waste and explain how and why we waste things (L1);
- identify the 3 Rs and explain what they mean (L2);
- define zero waste and list practical and creative ways they can reduce, reuse and recycle in their daily lives (L3);
- write a reflection journal about zero waste (L3);
- repurpose items they have at home (L3);
- quantify the amount of waste they make and create graphs to present the information (L4);
- make a poster depicting their zero waste action plan (L5); and
- use new vocabulary correctly (L1-5).

Green Guardians K–2 Lesson Series

My Animal Friends

Students follow the story of Timor, a “bug enthusiast”, who rescues a monarch caterpillar from his backyard and takes it to school to try to save it. Students will consider the environmental impact of pesticides and habitat loss on pollinators and learn how they can protect and increase the population of monarch butterflies.

Topics Covered:

Biodiversity | Ecosystems | Environmental Justice | Green Guardianship | Sustainable Human Development

Key Learning Points:

Lesson 1

- A monarch butterfly undergoes four stages of metamorphosis.
- Monarchs need a particular habitat to support their migratory life cycle.

Lesson 2

- Pollinators are necessary for plants to make seeds and reproduce.
- We can protect pollinating insects and their habitat by cutting pesticide use.
- All living things are connected to and depend on each other.

Lesson 3

- We can support the restoration of monarch butterfly habitats.
- Waystations help monarch butterflies complete their migratory patterns and continue their species.

Project

- Monarch butterfly waystations support biodiversity.

Students Will Be Able To:

- identify the stages of metamorphosis (L1);
- explain what monarch butterflies need to survive (L1);
- write a reflection journal on three interesting things they learned about monarch butterflies (L1);
- explain the role of pollinators in the ecosystem (L2);
- list threats to pollinators (L2);
- explain what a monarch waystation is and how it can help re-establish habitats (L3);
- plant nectar flower seeds, tend seedlings, and keep a plant journal (Project);
- design and/or build a monarch waystation at home or at school (Project); and
- use new vocabulary correctly (L1-3 and Project).

Green Guardians K–2 Lesson Series

My Carbon Footprint

Students follow the story of a wildfire that has caused Aunt Kitty to evacuate her home. This extreme weather event frames the inquiry into carbon footprint. Students learn how lifestyle choices influence global warming and climate change and what they can do to decrease their carbon footprints.

Topics Covered:

Climate Change | Disasters and Conflicts | Environmental Justice | Green Guardianship | Sustainable Human Development

Key Learning Points:

Lesson 1

- Extreme weather events occur more frequently as a result of global warming.
- Humans are responsible for increased amounts of greenhouse gas in the atmosphere.
- Increased greenhouse gas emissions are a main cause of global warming.

Lesson 2

- Most things we do leave carbon footprints.
- We can measure our carbon footprints.
- Changing our behavior changes our carbon footprint.

Lesson 3

- We can reduce the size of our individual carbon footprints.
- Individual actions are helpful but systemic change is needed.

Students Will Be Able To:

- define global warming and natural disaster (L1);
- explain how and why global warming is occurring (L1);
- write a reflection journal on ideas related to the stories (L1);
- define carbon footprint (L2);
- measure their own carbon footprints (L2);
- create an action plan for reducing their own carbon footprints (L3);
- set goals and collect evidence for a one-week period to show how they can reduce their carbon footprint at home (L3);
- acknowledge the benefits but also the limitations of reducing their own carbon footprints, i.e., the impact of climate change in general and who/what is causing it (L1-3); and
- use new vocabulary correctly (L1-3).

Green Guardians K–2 Lesson Series

Water Justice

Students follow the story of Coco’s Aunt whose well has dried up. Students look at where water comes from, how we use it, how we are affected by shortages and who controls access to it. At a protest march, Coco learns about issues of fairness and actions people can take to help rectify water inequities. Coco and her friends become activists—water protectors.

Topics Covered:

Environmental Justice | Health | Pollution | Resource Conservation

Key Learning Points:

Lesson 1

- We take water for granted.
- Access to clean water is not always equitable.
- Access to clean water is a human right.

Lesson 2

- Drought is causing water shortages as well as unequal access.
- Peaceful protest is a form of activism.

Lesson 3

- Young people can become activists and make a difference.

Students Will Be Able To:

- list sources of fresh water (L1);
- explain the importance of water and why everyone needs access to it (L1);
- participate in and analyze the results of a one-day “gallon challenge” that asks them how they would use one gallon of water in a day (L1);
- explain what human rights are and how they relate to natural resources (L1);
- identify the qualities of activists and define activism (L2);
- read and analyze a poem about water and human rights (L2);
- write a reflective journal about the story (L2);
- design a T-shirt for the Water Protectors (L3); and
- use new vocabulary correctly (L1-3).

Green Guardians K–2 Lesson Series

My Green School

Students follow the story of Coco and her friends' quest to turn their school green. They find that the school's cafeteria is not very environmentally friendly. Through their investigation, Coco and her friends learn the causes of food waste and its impact on our planet. They explore ways to cut waste and create a greener school.

Topics Covered:

Health | Resource Conservation | Sustainable Human Development | Waste Management

Key Learning Points:

Lesson 1

- Being environmentally friendly requires conscious effort.
- An indoor "green" space creates a healthy environment and benefits everyone.

Lesson 2

- Food waste occurs in many forms.
- We can consciously reduce, reuse, and recycle food to make as little waste as possible.

Lesson 3

- There are many things we can do to reduce food waste.
- We should take the time to convince and remind others to be green.

Lesson 4

- Schools are a good place to model the practice of "going green."

Students Will Be Able To:

- define what it means to be "environmentally friendly" (L1);
- explain what a green school could look like and distinguish between "green" and "not green" areas in a school (L1);
- cite examples of food waste (L2);
- explain how the food services at school can "go green" (L2);
- identify solutions for reducing food waste at school (L3);
- design a green "lunch makeover" to appeal to students at their school (L3);
- analyze the problem areas at their school and suggest ways they can turn them green (L4);
- conduct a Show and Tell group presentation on concrete ways their schools can go green (L4); and
- use new vocabulary correctly (L1-3).

Green Guardians 3–5 Lesson Series

Bananas About Chocolate

Students analyze the relationship between the links in the supply chain that connect the developing and developed world, with a focus on human and environmental issues. Students are introduced to the concept of fair trade and what individuals and businesses can do to support it.

Topics Covered:

Climate Change | Environmental Justice | Ecosystems | Resource Conservation
Sustainable Human Development

Key Learning Points:

Lesson 1

- Chocolate production involves people and companies in different parts of the world.
- We often don't consider whether a price of something is fair to the producer or harms the environment.

Lesson 2

- Every link in the chocolate supply chain creates human and environmental impacts.
- These human and environmental impacts are not always visible.
- Supply chain economics is not always equitable.

WebQuest

- Achieving equity in a supply chain, especially that between the developed and developing world, is a complex undertaking.

Students Will Be Able To:

- explain how chocolate is made and where it is from (L1);
- do a comparative analysis of two advertisements and identify the relationship between audience, purpose, and content (L1);
- describe the steps in the chocolate supply chain (L2);
- identify the hidden costs in the chocolate supply chain (L2);
- draw a sustainable supply chain (L2);
- do research on different roles in the chocolate supply chain (WebQuest);
- identify fair trade practices (WebQuest);
- design an advertising campaign for a fair and sustainable chocolate product (WebQuest); and
- use new vocabulary correctly (L1-2 and WebQuest).

Green Guardians 3–5 Lesson Series

My Journey to Circular Fashion

Students analyze how overproduction and overconsumption creates a massive amount of clothing waste. Students are also introduced to the environmental and social problems caused by fast fashion and how we can use the 6 Rs—refuse, re-wear, reuse, repair, repurpose, and recycle—to make fashion circular.

Topics Covered:

Green Guardianship | Environmental Justice | Pollution | Resource Conservation
Sustainable Human Development | Waste Management | Ecosystems

Key Learning Points:

Lesson 1

- We need to rethink our shopping habits and identify wasteful behaviors.
- Second-hand clothing shops and the donations we make to them are a partial solution.

Lesson 2

- Clothing production contributes to many environmental problems.
- The fast fashion industry incentivizes overproduction and overconsumption.

Lesson 3

- The fast fashion industry has negative social and environmental impacts.
- We can make a difference by practicing the 6 Rs to cut clothing waste.
- Many green alternatives for clothing have positive and negative impacts.

Students Will Be Able To:

- distinguish between synthetic, semi-synthetic, and natural fibers (L1);
- define “trend” and explain how it affects people’s shopping behaviors (L1);
- describe a second-hand store and its functions (L1);
- research a clothing material and present findings (L1);
- identify the environmental problems created by the fast fashion industry (L2);
- cite examples of textile waste (L2);
- explain how textile waste is managed (L2);
- report on the clothing recycling facilities near them (L2);
- explain who is exploited at the expense of the fast fashion industry (L3);
- identify the 6 Rs to cut clothing waste (L3);
- suggest ways to make better clothing choices (L3);
- design their own circular fashion initiatives by identifying the problem, researching existing practices, and making an action plan (L3); and
- use new vocabulary correctly (L1-3).

Green Guardians 3–5 Lesson Series

Exploring Ecosystems

Students learn about ecosystems and keystone species by focusing on one of the most famous denizens of the Mojave Desert, the Joshua tree. The lessons help students explore how factors such as climate change, wildfires, and human encroachment threaten this iconic species and steps they can take to safeguard biodiversity.

Topics Covered:

Biodiversity | Climate Change | Disasters and Conflicts | Ecosystems | Environmental Justice
Resource Conservation | Sustainable Human Development

Key Learning Points:

Lesson 1

- Ecosystems have living and non-living things.
- Members in an ecosystem depend on each other to thrive.

Lesson 2

- A keystone species maintains the health of an ecosystem.
- The Joshua tree ecosystem has environmental, cultural, and historical values.

Lesson 3

- The Joshua tree ecosystem is facing threats including wildfires, invasive species, reproduction problems, climate change, and human activities.
- Both individuals and organizations can help conserve and restore fragile ecosystems.

Lesson 4

- Biodiversity and healthy ecosystems benefit humans.
- Human-caused changes to natural systems can influence the health of ecosystems.

Students Will Be Able To:

- identify basic factors of an ecosystem (L1);
- explain why ecosystems, large or small, are important to human beings (L1);
- research mammals, birds, insects and decomposers in the Joshua tree ecosystem (L1);
- articulate the roles of a keystone species in an ecosystem (L2);
- analyze different ecosystem services provided by the Joshua tree (L2);
- identify ways to take care of ecosystems (L3);
- take action to protect the Joshua tree ecosystem (L3);
- conduct research on an ecosystem in their area and make a poster (L4);
- write an ecosystem stewardship pledge (L4);
- practice ecosystem stewardship and share their experience (L4); and
- use new vocabulary correctly (L1-4).

Green Guardians 3–5 Lesson Series

My Carbon Neutral School

Students learn about non-renewable and renewable energy and go on a school energy audit with Dean and his friends. They also perform calculations based on the data and recommend practical and creative ways their school can go carbon neutral.

Topics Covered:

Sustainable Human Development | Climate Change | Resource Conservation | Green Guardianship

Key Learning Points:

Lesson 1

- Both non-renewable and renewable energy sources have their pluses and minuses.
- Power blackouts are a symptom of climate change and excessive use of energy.

Lesson 2

- An energy audit establishes a baseline for daily energy use.
- Some energy drains are not always obvious (i.e. weekend consumption).

Lesson 3

- No single carbon neutral solution is perfect.
- Some carbon neutral strategies can be costly but over the long term will yield the desired carbon-neutral results.

Lesson 4

- Onsite renewable energy production can achieve carbon neutrality.
- Buying electricity from green power companies is a good alternative.

Students Will Be Able To:

- distinguish between non-renewable and renewable energy sources (L1);
- identify the reasons for more frequent blackouts (L1);
- express their thoughts on the most effective renewable energy source with supporting details (L1);
- illustrate steps of an energy audit (L2);
- work on math problems to determine the energy consumption of a school in 10 days (L2);
- explain how carbon offsetting works and its limitations (L3);
- identify ways to conserve energy and become more energy efficient (L3);
- cite examples of onsite energy production and green power purchases (L4);
- design a carbon neutral school to address schools' energy consumption problems (L4); and
- use new vocabulary correctly (L1-4).

Green Guardians 3–5 Lesson Series

Tough Choices

Students follow the story of Coco's first asthma attack and learn about air pollution caused by wildfire smoke, motor vehicle emissions and coal-fired power plants. They also role play in a special town meeting to voice their opinions, ask questions, and make "tough choices" about the continued operation of a local power plant.

Topics Covered:

Health | Environmental Justice | Pollution | Green Guardianship | Resource Conservation
Sustainable Human Development

Key Learning Points:

Lesson 1

- Air pollution has serious effects on our health and the environment.
- Choices about using renewable or non-renewable energy affect natural systems and the organisms that depend upon them.

Lesson 2

- There are many different factors to consider when making decisions about human activities that can cause changes to natural systems.

Lesson 3

- All voices should have the opportunity to be heard in matters affecting local communities and beyond.
- When comparing different proposals for possible solutions to a problem, potential impacts should be taken into consideration.

Students Will Be Able To:

- define air pollution and explain how it affects people and the environment (L1);
- identify sources of air pollution in their area (L1);
- explain how to participate in a town meeting (L2);
- make recommendations regarding the future of a local coal-fired power plant from the point of view of different community members (L2);
- support ideas with data, facts, and examples (L2);
- role play different members of a community and speak in a town meeting (L3);
- pose and respond to specific questions by making comments that contribute to making decisions that affect everyone in the community (L3);
- vote for a decision and reflect on one's civic duty (L3); and
- use new vocabulary correctly (L1-3).

Green Guardians 3–5 Lesson Series

Climate Change and Our Oceans

Students learn about the problems facing our oceans due to climate change. The lessons help students explore how rising water temperatures, acidification, pollution, and other factors threaten the ocean. They identify practices that must be changed on the government, corporate and individual levels to save the seas.

Topics Covered:

Biodiversity | Climate Change | Disasters and Conflicts | Ecosystems | Environmental Justice
Resource Conservation | Sustainable Human Development

Key Learning Points:

Lesson 1

- Climate change is forcing marine life (e.g. gray whales) to change their habits.
- Global warming and pollution are disrupting the ocean's food web.

Lesson 2

- Rising ocean temperatures and acidification are adversely affecting the ocean.
- Coral reefs and the marine species they support are in danger of disappearing.

Lesson 3

- Rising sea levels and pollution pose threats to the ocean and the human society.
- If we do not act now to slow global warming, the conditions for living on Earth will soon get much worse.

Lesson 4

- We can save our oceans if we take steps to slow global warming right now.

Students Will Be Able To:

- describe the physical characteristics of gray whales, their diet, and the threats they are facing (L1);
- explain how rising ocean temperatures affect marine life (L2);
- describe the economic, social, and environmental impacts of rising sea levels (L3);
- identify problems facing the ocean as a result of climate change and other environmental factors (L2-3);
- project what the world will be like in 2050 if we do/do not act on climate change immediately (L3);
- list solutions for the problems facing the ocean (L4);
- complete a project on ways we can keep the ocean healthy and sustainable (L4); and
- use new vocabulary correctly (L1-4).

Green Guardians TK-K Lesson Series

Let's Compost

In this lesson series, students read stories about Chuck, the Compost Monster, and Leo, the Landfill Monster, and learn about ways to cut the amount of food waste we send to landfills.

Topics Covered:

Waste Management | Sustainable Human Development | Resource Conservation

Key Learning Points:

Lesson 1

- Food is turned into compost by worms, slugs, mold, and bacteria.
- Food scraps and materials (like cardboard) can be made into compost.
- Landfills are places where garbage trucks take food waste and trash.

Lesson 2

- Landfills are huge collection points for mixed trash that is not recyclable.
- Landfills pollute air, land, and water.
- Landfills grow bigger and bigger because of the amount of trash people throw away.

Lesson 3

- Individual compost bins repurpose food scraps and keep food waste out of landfills.
- Compost is food scraps turned into plant food.
- Landfills make our land, air, and water dirty.

Students Will Be Able To:

- order the steps of composting (L1);
- describe what Chuck, the compost monster, does to food waste (L1);
- compare Chuck, the compost monster, and Leo, the landfill monster, and talk about their differences (L2);
- describe how Leo, the landfill monster, is harmful to the environment (L2);
- count the number of compost monsters added to the neighborhood (L3);
- identify things that can go into home compost bins (L3); and
- start composting food waste at home (L3).
